LANDQART – Swiss Security Paper

Banknotes, passports and other high security documents demand a lot from the paper substrate. On the one hand, the originality and counterfeit security must be guaranteed, while on the other hand, these papers generally have to convey a sophisticated and aesthetically attractive image.

As one of the leading manufacturers of security paper in Europe, we know how to combine and to use a variety of proven and innovative security features. High-quality raw materials, professional processing, years of experience and Swiss precision make the security documents forgery-proof and guarantee their authenticity.

In terms of quality and security, we set the very highest standards and meet the demands of governments and central banks around the world.

BANKNOTES A banknote includes a variety of security features, many of which are introduced during the manufacture of the paper. The best known and most secure are the cylinder-mould made watermark and the security thread. Landqart AG manufactures banknote paper for more than 30 currencies, of which one of the best known is the Swiss franc, a recognized benchmark for quality and security. DURASAFE® is the latest and most secure and innovative development in the field of banknote substrates, a complex combination of paper and polymer creating transparent and semi-transparent windows.

PASSPORT AND VISA PAPER Passports are one of the most widely used and recognised forms of official identification. As a result, passport paper must contain some special security features in order to resist attempts of forgery or adulteration, and to maintain its integrity. Also included in the segment of identity papers are Visa Labels. Our visa label papers incorporate chemically reactive dyes to resist counterfeiting and, upon request, a secure coating, DIGISAFE®.

SECURITY FEATURES Landqart AG offers, in addition, a range of optimal solutions: IRISAFE®MICRO, an innovative, iridescent security feature; POLARISAFE®, a feature that can be covertly incorporated into security fibres or iridescent stripes; a distinctive watermark feature, SIGNUM™, that can be incorporated with traditional watermarks.
